# Contents

**1 Biology of the trans-Golgi network of mammalian cells** **1**
1.1 The Golgi apparatus . . . 1
1.2 The trans-Golgi network (TGN) . . . 3
1.2.1 Formation of MCS between the trans-Golgi cisternae and the ER for non-vesicular lipid transport . . . 3
1.2.2 Sphingomyelin synthase reaction and the role of the TGN in the sphingolipid pathway . . . 4
1.2.3 Transport vesicle formation at the TGN . . . 5
1.3 Important TGN key-players . . . 6
1.3.1 TGN key-lipids . . . 6
1.3.1.1 Ceramide . . . 6
1.3.1.2 Phosphatidylcholine (PC) . . . 7
1.3.1.3 Diacylglycerol (DAG) . . . 8
1.3.1.4 Sphingomyelin (SM) . . . 8
1.3.1.5 Phosphatidylinositol (PI) and Phosphatidylinositol 4 phosphate (PI4P) . . . 9
1.3.1.6 TGN lipid overview . . . 9
1.3.2 TGN key-proteins . . . 9
1.3.2.1 Protein kinase D (PKD) . . . 10
1.3.2.2 Phosphatidylinositol-4-kinase-III β (PI4KIII-β) . . . 11
1.3.2.3 Ceramide transfer protein (CERT) . . . 12
1.3.2.4 ER and TGN membrane-associated proteins . . . 14
1.3.2.5 Sphingomyelin synthase 1 (SMS1) . . . 14
1.3.2.6 Protein kinase C η (PKCη) . . . 16
1.3.3 CERT related ceramide transport theories . . . 16
1.3.4 Summarizing TGN key-player interactions . . . 17
1.3.5 TGN key-player interactions generate feedback structures . . . 19
1.3.6 Existing model-based studies related to the TGN . . . 20

**2 Theoretical framework** **22**
2.1 Ordinary differential equation (ODE) models for biochemical reaction networks 22

2.2 *In silico* experiment descriptions . . . 23
2.3 Error models . . . 23
2.4 Data sets . . . 24
2.5 Parameter estimation (PE) . . . 25
2.6 Ill-posed problems and parameter identifiability . . . 27
2.7 Bayesian model analysis . . . 28
2.8 Markov chain Monte Carlo (MCMC) sampling . . . 30
2.8.1 Basic Metropolis Hastings sampling . . . 30
2.8.2 Adaptive Metropolis . . . 31
2.8.3 Global sampling strategies: parallel tempering Markov chain Monte Carlo (PT-MCMC) sampling . . . 32
2.9 Bayesian predictions . . . 33
2.10 Uncertainty analysis . . . 34
2.11 Model comparison . . . 35

**3 Modeling sphingomyelin synthase 1 driven conversions at the TGN 37**
3.1 Experimental data . . . 38
3.2 SMS1 reaction models . . . 39
3.3 Bayesian model analysis of the SMS1 models . . . 41
3.4 Results model fitting . . . 42
3.5 Simple linear feedback model agrees with further data of experimental manipulations of SM synthesis . . . 42
3.6 Discussion: Model study supports the existence of feedback regulations at the TGN . . . 45

**4 Modeling interactions of the TGN key-players PKD, PI4KIIIβ and CERT 46**
4.1 Contributions . . . 47
4.2 Biological questions concerning the TGN . . . 47
4.3 Results wet lab experiments . . . 48
4.3.1 Overview about the experiments . . . 48
4.3.2 Using protein measurements from HEK293T cells . . . 48
4.3.3 Data and experiment types . . . 49
4.3.4 Absolute data . . . 50
4.3.4.1 Step 1: GFP standard and linear regression . . . 50
4.3.4.2 Step 2: Abundance estimation of ectopically expressed proteins 50
4.3.4.3 Step 3: Estimation of endogenous abundances . . . 52
4.3.4.4 Validation . . . 54
4.3.4.5 Quantification of PKD and CERT. . . . 55
4.3.5 Snapshot data . . . 55
4.3.6 Time series data . . . 56

4.3.7 Refinement measurements . . . . . 57
4.4 Image data post-processing and optical densitometry . . . . . 59
4.5 Data normalization . . . . . 60
4.5.1 Normalization of anti-phospho-PKD signals . . . . . 60
4.5.2 Normalization of anti-phospho-PI4KIIIβ and anti-phospho-CERT signals 62
4.5.3 Additional normalizations at predefined time instants . . . . . 62
4.6 Results Bayesian model analysis . . . . . 63
4.6.1 Modeling of TGN interactions . . . . . 63
4.6.2 Reaction kinetics . . . . . 67
4.6.3 ODE model parameters, inputs and outputs . . . . . 70
4.6.4 Design of Bayesian model analysis . . . . . 70
4.6.5 Results of Bayesian data fit . . . . . 73
4.6.6 Bayesian model comparison of models A and B . . . . . 76
4.6.7 Validation of model A . . . . . 77
4.6.8 Predictions I: The endogenous TGN . . . . . 78
4.6.9 Predictions II: The role of PKD in regulating ceramide transfer . . . . . 80
4.7 Summary Bayesian analysis of the TGN models . . . . . 81
4.8 Summary, discussion and outlook . . . . . 82
4.8.1 A circular CERT reaction scheme for ceramide transfer . . . . . 82
4.8.2 Regulation of ER-to-TGN ceramide transfer . . . . . 83
4.8.3 Measuring and predicting absolute quantities . . . . . 83
4.8.4 Model extensions . . . . . 84

**5 Final summary and conclusions 85**

**A Statistical model and definitions 88**
A.1 Probability space . . . . . 88
A.1.1 Set of outcomes . . . . . 88
A.1.2 $\sigma$-Algebra . . . . . 88
A.1.3 Measureable functions and probability measures . . . . . 89
A.2 Continuous real-valued random variables (RVRVs) . . . . . 90
A.3 Important formulas for continuous RVRVs and PDFs . . . . . 91

**B Modeling sphingomyelin synthase 1 driven conversions at the TGN 93**

**C Modeling interactions of the TGN key-players PKD, PI4KIIIβ and CERT 95**
C.1 PT-MCMC statistics . . . . . 95
C.2 Supporting results model B . . . . . 97

**Bibliography 99**
