## III Contents

I	<b>Abstract</b> .....	I
II	<b>Zusammenfassung</b> .....	II
III	<b>Contents</b> .....	III
1	<b>Aim of the work</b> .....	1
2	<b>Introduction</b> .....	2
2.1	Short overview of Chinese hamster ovary cell lines .....	2
2.2	Unspecific mutations: A short survey of their use in cell line generation .....	3
2.3	Selection methods for cell line generation of distinct phenotypes .....	4
2.4	Identification of unknown regulatory cellular factors .....	5
2.4.1	Proteomics .....	6
2.4.2	Transcriptomics .....	7
2.5	Pathway engineering towards high cell density cultures .....	8
2.5.1	Cell cycle engineering .....	8
2.5.2	Modulation of cell death factors .....	8
2.5.3	Relevance of heat shock proteins, molecular chaperons and detoxifying enzymes .....	10
2.5.4	Hypothermic factors .....	11
2.5.5	Metabolic engineering towards high cell densities .....	12
2.5.6	Increasing the maximal cell density by pathway engineering – A summary .....	13
2.6	Towards high cell density growing CHO cell lines: A theoretical approach .....	14
3	<b>Material and methods</b> .....	17
3.1	Cultivation .....	17
3.2	Sampling .....	19

## Contents

---

3.2.1	Cell culture supernatant recovery for analytical purpose .....	19
3.2.2	Cell pellet recovery for RNA and genomic DNA isolation .....	19
3.3	Manual cell counting .....	21
3.4	Cryopreservation and thawing.....	21
3.5	Next generation sequencing .....	22
3.6	Quantitative real-time PCR analysis.....	22
3.6.1	Total RNA isolation .....	22
3.6.2	cDNA generation .....	22
3.6.3	Quantitative real-time PCR analysis.....	23
3.7	Preparative Methods.....	26
3.7.1	Genomic DNA isolation .....	26
3.7.2	Preparative PCR.....	27
3.7.3	Custom gene synthesis.....	29
3.7.4	Restriction digest.....	29
3.7.5	DNA dephosphorylation .....	30
3.7.6	DNA phosphorylation .....	30
3.7.7	Isolation and Purification of DNA Fragments.....	30
3.7.8	Ligation .....	30
3.7.9	Transformation of competent <i>E.coli</i> DH5 $\alpha$ cells.....	30
3.7.10	<i>E.coli</i> cultivation .....	31
3.7.11	Plasmid DNA preparation .....	32
3.7.12	Linearisation of vectors and sterile DNA precipitation .....	32
3.8	Vectors and cell line generation.....	33
3.8.1	Overview on basal vectors and their derivatives .....	33

---

3.8.2	Nucleofection of CHO-S cell lines .....	35
3.8.3	Selection of positively transfected cells and further cultivation .....	35
3.8.4	Limited dilution and clonal cell line generation .....	36
3.9	Analytics .....	37
3.9.1	Fixation of cells and DAPI staining .....	37
3.9.2	Agarose Gel Electrophoresis .....	37
3.9.3	Plasmid DNA Sequencing .....	39
3.9.4	Determination of glucose concentration .....	39
3.9.5	hIgG ELISA.....	40
3.9.6	SDS-PAGE.....	42
3.10	Data compilation and computation .....	43
3.11	Material .....	44
3.12	Terms and acronyms .....	46
3.13	Cell line terminology.....	46
<b>4</b>	<b>Results .....</b>	<b>47</b>
4.1	Generation of a clonal CHO cell line with capability growing at HCD.....	47
4.1.1	Adaption of CHO-K1 cells to CM1035 .....	47
4.1.2	Chemical mutagenesis and mutated cell regeneration .....	48
4.1.3	Selection of CHO-S-E400 towards growth at high osmolality and glutamine absence .....	52
4.1.4	Single cell cloning of CHO-S-E400 <sub>HyOsm</sub> .....	54
4.1.5	Selection of CHO-S-E400 <sub>HyOsm</sub> clones .....	55
4.1.6	Single cell cloning of 25-CHO-S.....	57
4.1.7	Transfection and productivity of CHO-S-E400/1.104 and 25-CHO-S/2.5C8 .....	58

---

## Contents

---

4.1.8	Accumulating cell culture CHO-S-E400/1.104 and 25-CHO-S/2.5C8 .....	60
4.1.9	Optimised fedbatch cultures and sampling for factor identification.....	61
4.2	Factor identification and verification .....	63
4.2.1	Transcriptomics by HiSeq 2000 .....	63
4.2.2	Factor verification using quantitative RT-PCR.....	64
4.3	Factor validation in non-producing and producer cell lines .....	69
4.3.1	Validation of <i>cgrTPRp</i> in non-producing 25-CHO-S/2.5C8 cells.....	70
4.3.2	Validation of LOC100759461/TPR repeat-containing protein C10orf93-like .....	71
4.3.2.1	Structural and homological relationship of C10orf93-like species .....	71
4.3.2.2	Validation of <i>cgrC10orf93-like</i> in 25-CHO-S/2.5C8 and K20-3 cell line .....	72
4.3.3	Validation of <i>cgrGas5</i> variants and <i>cgrSnord78</i> .....	75
4.3.3.1	Identification, isolation and characterisation of <i>cgrGas5</i> variants .....	75
4.3.3.2	Validation of <i>cgrGas5</i> variants in 25-CHO-S/2.5C8 .....	79
4.3.3.3	Isolation and validation of <i>cgrSnord78</i> in 25-CHO-S/2.5C8 as well as K20-3 cell line .....	82
4.3.3.4	Single cell cloning of K20-3/ <i>cgrSnord78</i> .....	86
4.3.3.5	Application of K20-3/ <i>cgrSnord78</i> variants in a production fedbatch process .....	86
4.3.4	Validation of <i>cgrTtc36</i> .....	92
4.3.4.1	Amplification of <i>cgrTtc36</i> .....	92
4.3.4.2	Validation by overexpression in non-producing cell line 25-CHO-S/2.5C8.....	93
4.3.4.3	Further effect validation by overexpression in hlgG-producing cell line K20-3 ....	94
4.3.4.4	Clonal variations in K20-3/ <i>cgrTtc36</i> .....	98
4.3.4.5	Application of K20-3/ <i>cgrTtc36</i> variants in a production fedbatch process .....	104
4.3.4.6	An excursus: The co-expression of <i>cgrTtc36</i> with <i>cgrSnord78</i> and <i>cgrTPRp</i> .....	107

---

<b>5</b>	<b>Discussion .....</b>	<b>110</b>
5.1	Increase of genomic variation by mutagenesis and the selection process .....	110
5.1.1	Mutagenesis and recovery of the 25-CHO-S cell line.....	110
5.1.2	Selection towards growth at high cell densities .....	111
5.2	Transcriptomic analysis and data verification.....	113
5.3	The tetratricopeptide repeat-containing proteins.....	117
5.3.1	The effect upon the overexpression of <i>cgrTPRp</i> .....	117
5.3.2	The putative function of <i>cgrTtc36</i> .....	118
5.3.2.1	Prediction of secondary as well as tertiary structure, modifications and cellular localisation of <i>cgrTtc36</i> .....	120
5.3.2.2	The interaction of <i>cgrTtc36</i> with Hsp70 and the impact thereof.....	129
5.3.2.3	The mechanism behind <i>cgrKmtTtc36</i> fusion protein formation and action.....	132
5.3.2.4	Putative mode of inhibition of <i>cgrTtc36</i> -mediated effects.....	140
5.3.3	The putative localisation as well as function of <i>cgrC10orf93-like/cgrTtc40-like</i> .....	146
5.3.4	The inhibition of cell aggregation in <i>cgrTtc36</i> and <i>cgrC10orf93-like/cgrTtc40-like</i> overexpressing cell lines.....	150
5.4	Arguments on <i>cgrGas5</i> and its intronic sequence <i>cgrSnord78</i> .....	159
5.4.1	Insights into the function and structure of <i>cgrGas5</i> .....	159
5.4.2	Possible function and targets of <i>cgrSnord78</i> .....	163
5.5	Optimisation and industrial relevance of <i>cgrSnord78</i> and <i>cgrTtc36</i> .....	172
<b>6</b>	<b>Conclusion and perspectives .....</b>	<b>176</b>
<b>7</b>	<b>References .....</b>	<b>178</b>
<b>8</b>	<b>Abbreviations .....</b>	<b>207</b>
