

## Table of Contents

Preface	
Acknowledgements	
Frequently Used Symbols	ix
Milestones in Boundary-Layer Transition	xiii
A Preview of Transition	xv
Part I – Before and After	
1. Basic Equations	3
1.1 Elements of Fluid Mechanics	3
1.2 Equations for Fluctuating Flow	5
1.3 Equations for Two-Dimensional Flow	10
1.4 Prandtl’s Boundary-Layer Theory	11
1.5 Other Definitions and Equations	16
References	20
2. Laminar Boundary Layers	21
2.1 A Steady Boundary Layer –Blasius’ Solution	21
2.2 Unsteady Boundary Layers without a Mean Flow	25
2.3 Unsteady Boundary Layers with a Mean Flow	28
References	47
3. Turbulent Boundary Layers	49
3.1 Isotropic Turbulence	49
3.2 A Phenomenological Approach	54
3.3 A Differential Approach	62
3.4 Free-Stream Turbulence	73
3.5 Near-Wall Turbulence	77
References	85
Part II – In Between	
4. Pre-Transitional Flow	91
4.1 Seeds of Transition	92
4.2 Path to Natural Transition	94
4.3 Path to Bypass Transition	114
References	135
5. Turbulent Spots	141
5.1 Anatomy of a Spot	142
5.2 Emmons’ Turbulent Spot Theory	155
5.3 Spot Kinematics	174
5.4 Spots and Becalmed Matters	191
5.5 Propagation Parameters	203
References	208
6. Transition Correlations	213
6.1 Beginning and End of Transition	213
6.2 Zero Pressure-Gradient Flows	219
6.3 Nonzero Pressure-Gradient Flows	230
6.4 Effect of Surface Curvature	235
