Abstract **xi**

Part I Introduction

1 Introduction to the event-based control of mobile agents **3**
1.1 Purpose of the cooperative control of mobile agents . . . 3
1.2 Event-based control of mobile agents . . . 4
1.3 Motivation and application fields . . . 6
1.3.1 Motivation for the event-based control of mobile agents . . . 6
1.3.2 Application scenarios . . . 7
1.4 Problem formulation and fundamental questions . . . 10
1.4.1 Control problem . . . 10
1.4.2 Decomposition of the control problem and steps of solution . . . 12
1.4.3 Main assumptions . . . 16
1.5 Literature review . . . 18
1.6 Contribution of this thesis . . . 24
1.7 Structure of this thesis . . . 26

2 Preliminaries **29**
2.1 Notation . . . 29
2.2 Specification of the position of an agent . . . 30
2.3 Bézier curves . . . 31
2.3.1 Definition and properties . . . 31
2.3.2 Transformation of a curve from the Bernstein base into the monomial base . . . 36
2.3.3 Algorithms . . . 37
2.4 Gradient descent optimisation method . . . 38
2.5 Demonstration examples . . . 39
2.5.1 Unmanned aerial vehicle . . . 39
2.5.2 Car on a motorway . . . 41

Part II Fundamental methods

3 Trajectory planning **45**
3.1 Planning problem . . . 45
3.2 General planning method . . . 46
3.2.1 Determination of the control points . . . 46
3.2.2 Default transition time interval . . . 49
3.2.3 Minimisation of the transition time interval . . . 49
3.2.4 Planning task and planning algorithm . . . 56
3.3 Planning of a circular trajectory . . . 58
3.3.1 Circular segments . . . 58
3.3.2 Planning of a circular trajectory using quarter circle segments . . . 65
3.3.3 Planning task and planning algorithm . . . 66
3.4 Two planning scenarios . . . 69
3.4.1 Trajectory for a change of the speed . . . 69
3.4.2 Trajectory for a change of the height . . . 76
3.4.3 Planning task and planning algorithm . . . 80

4 Prediction and event generation **83**
4.1 Overview . . . 83
4.2 Prediction of the movement of mobile agents . . . 84
4.2.1 General prediction method . . . 84
4.2.2 Specific prediction method for a circular movement . . . 90
4.3 Event generation . . . 93
4.3.1 General events . . . 93
4.3.2 Specific events for a circular movement . . . 99

5 Properties of the communication network **105**
5.1 Communication between mobile agents . . . 105
5.1.1 Communication over an ideal network . . . 105
5.1.2 Communication over an unreliable network . . . 106
5.2 Two common models of communication networks . . . 107
5.2.1 Packet loss models . . . 107
5.2.2 Radio propagation models . . . 109
5.3 Communication model for UAV applications . . . 113
5.3.1 Model of the wireless channel . . . 113
5.3.2 Two-state Markov model . . . 118
5.3.3 Analysis of the Markov model . . . 119
5.3.4 Estimation of the parameters of the Markov model . . . 122

Part III Event-based control over an ideal communication network

6 Structure and tasks of the event-based control units 127
6.1 Introduction . . . 127
6.2 Event-based control unit A_S of the stand-on agent . . . 128
6.2.1 Structure of the control unit . . . 128
6.2.2 Tasks of the prediction unit G_S . . . 128
6.2.3 Tasks of the event generator E_S . . . 129
6.2.4 Task of the trajectory planning unit T_S . . . 130
6.3 Event-based control unit A_G of the give-way agent . . . 131
6.3.1 Structure of the control unit . . . 131
6.3.2 Tasks of the prediction unit G_G . . . 131
6.3.3 Tasks of the event generator E_G . . . 132
6.3.4 Task of the trajectory planning unit T_G . . . 133

7 Components of the event-based control unit 135
7.1 Overview . . . 135
7.2 Prediction unit G_G . . . 136
7.2.1 General prediction . . . 136
7.2.2 Specific prediction for a circular movement . . . 136
7.3 Event generator E_G . . . 137
7.3.1 Overview of the general event generation . . . 137
7.3.2 Communication event e_{G0} . . . 137
7.3.3 Proactive event e_{G1} . . . 141
7.3.4 Reactive event e_{G2} . . . 143
7.3.5 Overview of the specific event generation for a circular movement 144
7.3.6 Communication event e_{G0} for a circular movement . . . 145
7.3.7 Proactive event e_{G1} for a circular movement . . . 148
7.3.8 Reactive event e_{G2} for a circular movement . . . 149
7.4 Trajectory planning unit T_G . . . 150
7.4.1 General planning tasks . . . 150
7.4.2 Phase 1: Trajectory to adjust the distance to the stand-on agent . . . 152
7.4.3 Phase 2: Trajectory to keep the adjusted distance to the stand-on agent 155
7.4.4 Phase 3: Trajectory to return to the initial trajectory . . . 156
7.4.5 Specific planning tasks for a circular movement . . . 158
7.4.6 Phase 1: Trajectory to adjust the phase or the height to the stand-on agent . . . 158
7.4.7 Phase 2: Trajectory to keep the adjusted phase or the height to the stand-on agent . . . 160
7.5 Communication method . . . 161
7.5.1 Communication flow . . . 161
7.5.2 General communication frequency . . . 163

7.5.3 Specific communication frequency for a circular movement 165
7.6 Algorithms for the event-based control of mobile agents for an ideal network 168

Part IV Event-based control over an unreliable communication network

8 Communication over an unreliable network 175
8.1 Consequences of unreliable communication links 175
8.1.1 Assumptions 175
8.1.2 Communication delays 176
8.1.3 Packet losses 178
8.2 Extension of the event-based control units 179
8.2.1 Event-based control unit A_S of the stand-on agent for an unreliable network 179
8.2.2 Event-based control unit A_G of the give-way agent for an unreliable network 180

9 Additional components of the event-based control unit 183
9.1 Overview 183
9.2 Delay estimator D_G 184
9.2.1 Task of the delay estimator 184
9.2.2 Estimation of the time delay 185
9.2.3 Algorithm of the event-based delay estimation 189
9.3 Prediction unit G_G 190
9.3.1 Task of the prediction unit 190
9.3.2 Prediction for a general movement 190
9.3.3 Prediction for a circular movement 193
9.4 Event generator E_G 194
9.4.1 Overview of the general event generation 194
9.4.2 Communication event e_{G0} 196
9.4.3 Proactive event e_{G1} 201
9.4.4 Reactive event e_{G2} 201
9.4.5 Packet loss event e_{G3} 201
9.4.6 Estimation event e_{G4} 202
9.4.7 Specific event generation for a circular movement 202
9.5 Trajectory planning unit T_G 207
9.6 Analysis of the event generation in the presence of time delays and packet losses 210
9.7 Extended communication method 215
9.8 Algorithms for the event-based control of mobile agents for an unreliable network 218

Part V Simulation studies and Experiments

10 Demonstration example: Cooperative quadrotors **225**
10.1 Hardware of the quadrotors . . . 225
10.2 Quadrotor dynamics . . . 227
10.2.1 Nonlinear model . . . 227
10.2.2 Partially linearised model . . . 231
10.2.3 Affine model . . . 232
10.2.4 Decomposition of the system behaviour by decoupling . . . 233
10.2.5 Motor dynamics . . . 235
10.3 Local control of a quadrotor . . . 235
10.3.1 Control loop of the quadrotor . . . 235
10.3.2 Flatness of the quadrotor model . . . 238
10.3.3 Feedforward controller . . . 239
10.3.4 Feedback controller . . . 240
10.3.5 Maximum tracking error . . . 244
10.4 Event-based control of two quadrotors . . . 245

11 Simulation studies **247**
11.1 Aims . . . 247
11.2 Scenario 1: Estimation of the time delay depending on the movement of the agents . . . 248
11.2.1 Description of the scenario . . . 248
11.2.2 Results of the scenario . . . 249
11.3 Scenario 2: Ensuring collision avoidance in the presence of packet losses . 253
11.3.1 Description of the scenario . . . 253
11.3.2 Results of the scenario . . . 254
11.4 Scenario 3: Fulfilment of the maximum separation in the presence of packet losses . . . 258
11.4.1 Description of the scenario . . . 258
11.4.2 Results of the scenario . . . 259
11.5 Concluding remarks . . . 262

12 Experiments **263**
12.1 Aims . . . 263
12.2 Experimental test bed . . . 264
12.3 Experimental results . . . 267
12.3.1 Description of the scenario . . . 267
12.3.2 Part 1: Maintenance of a phase difference between two quadrotors 268
12.3.3 Part 2: Maintenance of a phase difference and a height difference between two quadrotors . . . 273
12.3.4 Maintenance of a phase difference between two robots . . . 275

12.4 Computational aspects and concluding remarks 278

13 Conclusion **281**
13.1 Summary 281
13.2 Outlook 282

Bibliography **285**

Appendix

A Introduction to Markov Models **299**
A.1 Mathematical basics 299
A.2 Discrete probability theory 300
A.3 Markov chains 302
A.4 Properties of Markov chains 304
A.5 Stationary probability distribution 305
A.6 Hidden Markov model 310
A.7 Continuous probability theory 311

B Proofs **313**
B.1 Proof of Theorem 3.1 313
B.2 Proof of Theorem 4.1 315
B.3 Proof of Theorem 7.1 318
B.4 Proof of Theorem 7.2 322
B.5 Proof of Lemma 7.1 323
B.6 Proof of Lemma 7.2 324
B.7 Proof of Lemma 7.3 326
B.8 Proof of Lemma 7.4 327
B.9 Proof of Theorem 7.5 328
B.10 Proof of Theorem 9.1 329
B.11 Proof of Theorem 9.2 330
B.12 Proof of Lemma 9.1 331
B.13 Proof of Lemma 9.2 331
B.14 Proof of Theorem 9.5 332
B.15 Proof of Proposition 10.1 333

C List of Symbols **337**
